PROFESSIONAL SUMMARY

Information Technology undergraduate (CGPA 9.4) specializing in cybersecurity and Python-based development, with hands-on experience building phishing detection, web vulnerability scanning, and red-team simulation systems. Skilled in Python, MongoDB, full-stack development (React.js, Node.js, Express.js), and machine learning model training. Internship experience automating data pipelines and managing database operations; published researcher in ML-based phishing detection. Seeking an entry-level role in AI Engineering or Cybersecurity to apply technical and analytical skills to secure, scalable systems.

EDUCATION

Bachelor of Technology — Information Technology

GMR Institute of Technology | 2024–2027 | CGPA: 9.4

Diploma — Computer Engineering

Behara Polytechnic | 2020–2024 | CGPA: 8.9

EXPERIENCE

Core Python & MongoDB Intern — Datapro, Visakhapatnam

June 2025 – July 2025

- Automated Python programs to streamline data processing workflows.
- Designed and managed MongoDB databases; executed CRUD operations and integrated Python with MongoDB to support data-driven applications.

PROJECTS

Web Vulnerability Scanner

- Built a full-stack web vulnerability scanner with secure authentication and role-based access control using React.js, Node.js, Express.js, and SQLite.
- Implemented security testing modules for default credential detection, security header validation, and directory exposure scanning.

AI-Assisted Red Team Simulation Platform

- Developed a full-stack cybersecurity simulation platform modeling real-world attack stages — initial access, privilege escalation, lateral movement, and data exfiltration — in a controlled environment.
- Built with React.js, Node.js, Express.js, and JWT authentication; integrated the Web Audio API for interactive visualizations and AI-based risk analysis.

College Management System

- Developed a Python-based application with role-based access for students, faculty, and administrators, covering authentication, student records, attendance tracking, and course management.

Real-Time Phishing Website Detection Using Machine Learning — Publication, Nov 2025

- Built a phishing detection system using 17 URL, host, and content-based features.
- Trained and ensembled Decision Tree, SVM, XGBoost, MLP, and Autoencoder models, achieving high detection accuracy and improved resilience against zero-day phishing attacks.

SKILLS

Programming Languages: Python, Java, Data Structures & Algorithms

Web & Database Technologies: HTML, CSS, JavaScript, React.js, Node.js, Express.js, MySQL, MongoDB, SQLite

CS Fundamentals & Security: DBMS, Software Engineering, OOP Concepts, Problem Solving, Web Vulnerability Assessment, Phishing Detection, Red Team Simulation

Soft Skills: Communication, Leadership, Team Collaboration, Time Management, Adaptability

Languages Known: English, Telugu

CERTIFICATIONS

- Welcome to ServiceNow (Micro-Certification) — ServiceNow
- Prompt Engineering for ChatGPT — Coursera
- Introduction to Generative AI — Coursera
- Core Python & MongoDB Internship Certificate — Datapro
